**Adding a Page**

Using Page, the teacher can create a page and gather all relevant notes, files, links, tests, etc. in one place. This will provide a better overview and easier access for the students, rather than require them to access everything from the tree menu. Pages can be shared to My library for other teachers to use.

Pages are put together using content block. On a page, you are allowed to add rich content, images, polls, RSS feeds, and links. Drag-and-drop and cut-and-paste functionality enables quick layout changes and fine-tuning of the content.

1. Go to your Course and click Add in the navigation tree. (If you want the page in a particular folder, click Add in the folder you wish to add the Page.) In the example below, the Page will be added to the folder titled **Unit 1**.

![Diagram of course navigation tree](image1)

2. Click **Page** in the list of Resources.

![Screenshot of resources selection](image2)

3. On the screen that opens, enter the following fields for the Page.
   a. **Title**: Click on the Banner titled “New Page” to change the title of a page.
   b. **Adding Content**: Click Add Content Block to begin adding items to the Page.
The table below shows the various types of Content Blocks that can be added to your Page.

<table>
<thead>
<tr>
<th>Content Block</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Files</td>
<td>Upload files from your computer and link to them from the Page. You can organize the files in folders, and they appear with clickable folders and links in the content block.</td>
</tr>
<tr>
<td>Images</td>
<td>Upload images from your computer, and insert them into the dashboard. The images are automatically resized.</td>
</tr>
<tr>
<td>Poll</td>
<td>Add a simple poll and allow other users to vote. The poll consists of a question and up to 10 alternative responses. You can choose to display the results to all users at any time, show them only after the user has cast a vote, or show the results to editors only. You can also decide to show the number of votes and allow users to change their vote.</td>
</tr>
<tr>
<td>Rich Content*</td>
<td>Add content blocks with text, images, links, and other rich content. This block has many of the same features as the note learning tool.</td>
</tr>
<tr>
<td>RSS Feed</td>
<td>Import your favourite RSS feeds into your dashboard. This allows you to subscribe to blogs, news media, and similar feeds, and to receive automatic updates when one of the RSS feeds is updated.</td>
</tr>
</tbody>
</table>

*The Rich Content block is the best one to use when creating a page.

To edit a content block, click on the pencil icon in the upper right corner of the block.

An example of a Page appears on the next page of this handout.
Lesson 6-3 Systems By Substitution

VIDEO
Algebra I Help: Solving Systems of Linear Equations with Substitution

INTERACTIVE PRACTICE
Determine the solution, the point of intersection.

y = 2x + 3
y = 6x - 9

(3, 9)
