

Corrections in itslearning, February 2013

Paging in Administration -> Supervisors page

The paging and numbering error in the bottom right corner has been addressed

eLogin redirects

When picking an eLogin site from the normal drop-down on itslearning.com, it is now possible to set if the site should be redirected to www.itslearning.com/elogin.

Joining projects from a Mac with Safari

Previously, Mac users using the Safari browser could not confirm project invitations. All supported browsers should now support project invitations.

Internet Explorer issue in hierarchy drop-downs

The width of the hierarchy drop-down used in policies was too narrow when using Internet Explorer 8. This has now been addressed.

Policies and Find hierarchy link

We have now added the "Find Hierarchy" link when adding persons to policies.

Plagiarism

We have focused on reducing the amount of documents going in error status and to avoid documents being stalled in "In progress" mode. We have also updated the error messages with more detailed information.

Issues with assignments linked from a lesson

Some assignments linked to from a lesson were running into an error on save. This has now been addressed.

Sort on role in participant list

We have fixed the problem where users were not sorted alphabetically when sorted on role in course participant list.

Students Could Not Add Audio-Recording in "Open Answer" Questions

Audio recordings weren't saved when students used Insert -> New audio recording into answers to Open answer questions. This has now been addressed.

Teachers assessing the same manually added assessment record column

If more than one teacher assessed a manually added assessment record column simultaneously, only changed grades from one teacher was updated. This has now been addressed.

Trash can

Users are now sorted by their delete date, and most recent deletes are at the top of the list.

Fixed headers in RSS feeds from itslearning blogs

When adding an itslearning blog as an RSS feed on another itslearning site by clicking on the header of an article, a “page doesn't exist” error appeared. This has now been addressed.

Exporting “fill in the blank” questions now works

When exporting fill in blank questions, the text written in the first editor window was transferred to the second editor window when imported into a new test. This has now been addressed.

Save and add new question of same type issue

When adding "Fill in blank" questions and using "Save and add new question of same type", the test did not save the alternatives. This issue has now been addressed.

Chrome, editor and YouTube

When using the Chrome browser and clicking Insert -> Web 2.0 content -> YouTube video from the rich-text editor, the video would only displayed a white screen. This issue has now been addressed.

Colour of deadline statuses in task content blocks

When a deadline has passed, the deadline status changed to "Overdue". Previously it was coloured red even if student had submitted an answer or not. We have now changed this to a grey label if an answer is submitted.

Performance improvements

We have improved the performance in test, participants list in course and the assessment record.
