

Corrections in itslearning, June 2013

Surveys

The 'Ok, next question' option in survey matrix questions now works as intended. Previously alternatives were left blank.

Tests

Tests with open questions and with random order activated previously displayed an incorrect question count in the assessment overview. Now the numbers under the heading 'Needing manual assessment' corresponds with numbers of questions with manual assessments in the table assessment view.

iPads and pages with pictures

Images that were added to a content block could only be opened once in a pop-up window when using the Safari browser on iPad. This issue has now been addressed.

Adding resources to plans

Some users reported that adding resources from My Library to a planner did not work if they were logged in via the shortname URL. This has now been addressed.

Proxy tools

It is once again possible to upload XML files as a source package for any proxy tool. Previously the uploaded files could not be uploaded because the file type was reported as invalid.

ePortfolios

Accessing ePortfolios should now be more consistent between users who log in via www. and the shortname URL.

Automatic password generation

An issue with HTML encoding of special characters in passwords when using the operation 'Print in list format' caused passwords to display incorrectly. This has now been addressed.

Working portfolios

In some cases accessing an element in the working portfolio could result in an error if the user had the simplified tree menu. This has now been addressed.
